

07/10

For TUESDAY:

- Write up all your subsystem's requirements as you understand them - both functional and non-functional. - use the case study to do this.
- Then if you have time, draw up an "activity" diagram of how you understand this to work in the subsystem so that we can look at all 4 subsystems together and visualise how they interact with each other to form the greater system.

In the next few weeks we will need to produce **per subsystem**:

1. Activity diagram
2. Class diagram
3. Sequence diagram
4. Component Diagram
5. Unit test plan
6. System test plan

Together we will produce:

1. Use case diagram
2. Architectural design of the whole system
